This hitch is supported by solid frame connections in six places, two to the top frame under the seat, two connections in the motorcycle frame lower guard rail mount bolts, and two attachments at the saddlebag support frame.

This hitch is as solid as can be and quiet too, because the vertical receiver hitch, with the Clatter-Free system, all but eliminates rattle coming from the receiver. The GL1800 hitch design advantage allows for the entire receiver section to unbolt quick and easy, for fast rear tire removal. All hitches are powder coated finished in black (parts shown here in yellow for illustration only). A new trailer light harness with no load relay will be available soon.
